

Package `hfvfloat`

Rotating Objects and Captions

ver 1.1

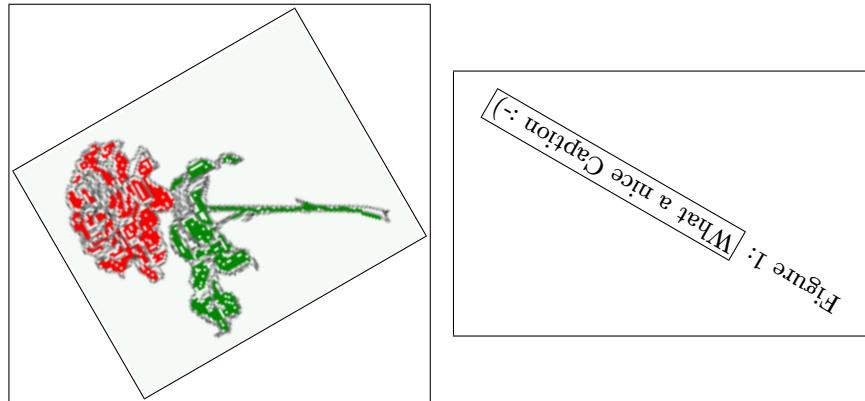

Herbert Voß*

May 31, 2003

Abstract

This `hfvfloat.sty` defines a macro to place objects and captions of floats in different positions with different rotating angles.

All objects and captions are framed, which is only for demonstration here and has no additional sense.

16	Nonfloat Captions	15

1 The Package Options

fbox The objects and captions are put into a `\fbox` command, like in this documentation. This doesn't make real sense and is only for some demonstration useful. This global package option set the macro options `framedCaption` and `framedObject` to `true`, which can locally be overwritten.

The length `\belowcaptionskip` is set by L^AT_EX to `0pt` and changed in `hfvfloat` to the same value than `\abovecaptionskip`. This length can be changed to another value in the usual way with `\setlength` or `\addtolength`.

2 The Macros

The syntax for the `\hvFloat` macro is

```
\hvFloat[<options>]%
  {<float type>}%
  {<floating object>}%
  [<short caption>]{<long caption>}%
  {<label>}
```

If the second parameter `<float type>` is empty, then `hfvfloat` switches by default to a nonfloat (see table 2) object, which is not important for the user. All other parameters may also be empty and the short caption as second optional parameter missing. This one is as usual the caption for the `listoffigures`.

There are some more macros defined, more or less for internally use in `hfvfloat`, but they can be used for own purposes.

```
\figcaption[<short caption text>]{<caption text>}
\tabcaption[<short caption text>]{<caption text>}
```

They are used for the nonfloat option, where these macros write captions in the same way but outside of a float environment. The default caption cannot be used here. It is no problem to use the `\tabcaption` command to place a caption anywhere, like here in an inlined mode:

Table 1: A Caption without any sense and any object

A label can be put inside the argument or after the command in the usual way, so that a reference to the not existing table 1 is no problem.

[...] It is no problem to use the `\verb|\tabcaption|` command to place a caption anywhere, like here in an inlined mode:
`\tabcaption[The Caption without sense ...]{A Caption without any sense and any object}\label{dummy}` A label can be put inside the argument or after the command in the usual way, so that a reference to the not existing table `\ref{dummy}` is no problem.

2.1 The Options

There are following options:

Table 2: The Options for the Macro `hvFloat`

Option	Default	Description
<code>floatPos</code>	<code>htb</code>	This is the same placement option like the one from the floats.
<code>rotAngle</code>	<code>0</code>	The value for the angle if both, the object and the caption should be rotated in the same way.
<code>capWidth</code>	<code>0.8</code>	The width of the caption. Can be " <code>w</code> " for the width of the object or " <code>h</code> " for the height of the object or a scale for <code>\columnwidth</code> .
<code>capAngle</code>	<code>0</code>	The value for the angle if the caption should be rotated. Counted anti clockwise.
<code>capPos</code>	<code>b</code>	The position of the caption relative to the object. Possible values are <code>(l)eft (b)ottom <code>(t)op <code>(r)ight</code></code>.</code>
<code>capVPos</code>	<code>c</code>	This is only important for <code>capPos=l r</code> . Only in this case the caption can vertically placed at the <code>(b)ottom <code>(c)enter <code>(t)op</code></code>.</code>
<code>objectPos</code>	<code>c</code>	The horizontalplacement of the object relative to the document. Possible values are <code>(l)eft <code>(c)enter <code>(r)ight</code></code>.</code>
<code>objectAngle</code>	<code>0</code>	The value for the angle if the object should be rotated. Counted anti clockwise.
<code>floatCapSep</code>	<code>5</code>	The additional width between the object and a left or right placed caption. The default unit is <code>pt</code> .
<code>useOBox</code>	<code>false</code>	Instead of passing the object as parameter to the <code>hvFloat</code> , the contents maybe saved in the box <code>\hvOBox</code> . With <code>useOBox=true</code> the contents of this box will be used.
<code>nonFloat</code>	<code>false</code>	The object isn't put in a floating environment. It is printed as standard text with an additional caption. The float counters are increased as usual and can be referenced.
<code>framedCaption</code>	<code>false</code>	The caption gets framed with a predefined <code>\fboxsep=1pt</code> . This option is set to true, if the global package option <code>fbox</code> is used.
<code>framedObject</code>	<code>false</code>	Same as the forgoing option, but only for the object.

3 The Default Use of Floating Environments

In this case there is no essential difference to the well known `figure` or `table` environment, f.ex.:

```
\begin{figure}
... object ...
\caption{...}% caption below the object
\end{figure}
```

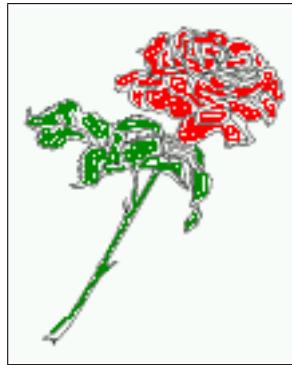

Figure 2: Without any Options (only the `fbox` package option)

Code for figure 2:

```
1 \hvFloat{figure}{\includegraphics{rose}}{Without any Options (only the
  \texttt{fbox} package option)}{fig:0}
```

Figure 3: With the only Option `capPos=t` to place the caption
on top of the table, which is often the default

Name	Type	Description
hvFloat	command	places object and caption in different ways
figcaption	command	writes a figure caption in a non floating environment
tabcaption	command	writes a table caption in a non floating environment
setDefaults	command	sets all options to the defaults

Code for table 3:

```
1 \hvFloat[capPos=t]{figure}{%
2   \begin{tabularx}{\textwidth}{l|l|X}
3     Name & Type & Description\\ \hline
4     \CMD{hvFloat} & command & places object and caption in different ways\\
5     \CMD{figcaption} & command & writes a figure caption in a non floating environment\\
```

```

6   \CMD{tabcaption} & command & writes a table caption in a non floating environment\\
7   \CMD{setDefaults} & command & sets all options to the defaults
8   \end{tabularx}%
9 }{With the only Option \texttt{capPos=t} to place the caption on top of the table, which
is often the default}{tab:0}

```

See section 10 for some more informations about tabulars as objects.

4 Caption Right or Left

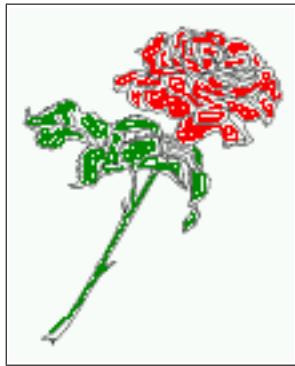

Figure 4: Caption vertically centered right beside the float with a caption width of 0.5\columnwidth and $\text{floatcapsep}=5\text{pt}$ (the default)

Code for figure 4:

```

1 \hvFloat[%]
2   floatPos=htb,%
3   capWidth=0.5,% of \columnwidth
4   capPos=r,%
5   capVPos=c,%
6   objectPos=c]{figure}{\includegraphics{rose}}%
7   [Caption beside object and vertically centered]%
8   Caption vertically centered right beside the float with a caption
     width of \texttt{0.5\textbackslash columnwidth} and \texttt{
     floatcapsep=5pt} (the default){fig:1}

```

4.1 Caption Right and Rotated

Code for figure 5:

```

1 \hvFloat[%]
2   floatPos=htb,%
3   capWidth=h,% of \columnwidth
4   capPos=r,%
5   capAngle=90,%
6   capVPos=c,%
7   objectPos=c]{figure}{\includegraphics{rose}}%
8   [Centered Caption beside Object]%
9   Caption vertically centered right beside the float with a caption
     width of \texttt{0.5\textbackslash columnwidth} and \texttt{
     floatcapsep=5pt} (the default){fig:2}

```

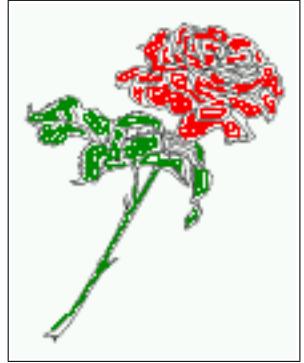

Figure 5: Caption vertically centered right beside the float with a caption width of 0.5\columnwidth and $\text{floatcapsep}=5\text{pt}$ (the default)

It is no problem to rotate the object, too. But with a different angle value than for the caption. Do not ask for the sense, it is only a demonstration of what is possible ... The object (image) is rotated by -30 degrees with the `rotatebox` makro.

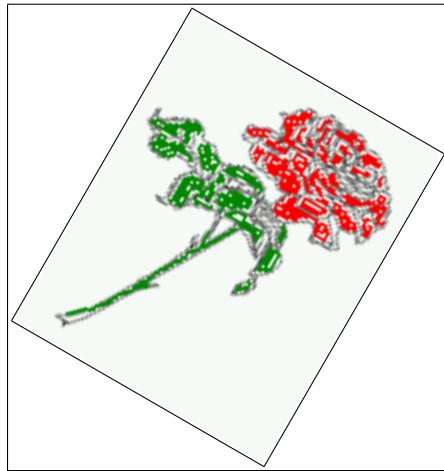

Figure 6: Caption vertically centered right beside the float with a caption width of the height of the image and $\text{floatcapsep}=5\text{pt}$ (the default)

Code for figure 6:

```

1 \hvFloat[%]
2   floatPos=htb,%
3   capWidth=h
4   capPos=r,%
5   capAngle=180,%
6   objectAngle=-30,%
7   capVPos=c,%
8   objectPos=c]{figure}{\fbox{\includegraphics{rose}}}{%
9   [Centered Caption beside Object]{%
10  Caption vertically centered right beside the float with a caption
      width of the height of the image and \texttt{floatcapsep=5pt} (the
      default)}{fig:3}}
```

5 Vertical Position of the Caption

The caption can be placed beside the object in the positions

(c) enter | (b) ottom| (t) op

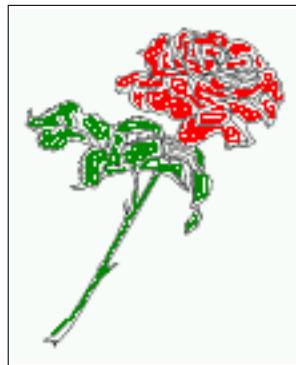

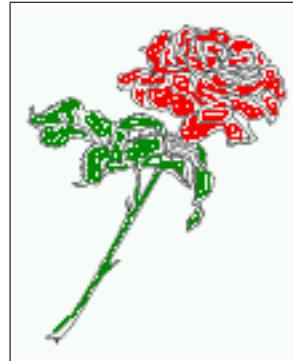

Figure 7: Caption at bottom right beside the float

The code for figure 7:

```
1 \hvFloat[%  
2   floatPos=htb,%  
3   capWidth=0.25,%  
4   capPos=r,%  
5   capVPos=b,%  
6 ]{figure}{\includegraphics{rose}}{Caption at bottom right beside the  
float}{fig:4}
```

Figure 8: Caption at top left beside the float

The code for figure 8:

```
1 \hvFloat[%  
2   floatPos=htb,%  
3   capWidth=0.25,%  
4   capPos=r,%  
5   capVPos=t,%  
6 ]{figure}{\includegraphics{rose}}{Caption at top left beside the float  
}{fig:5}
```

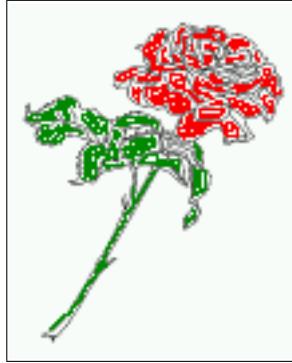

Figure 9: Caption
centered right
beside the float

The code for figure 9:

```
1 \hvFloat[%  
2   capWidth=0.25,%  
3   capPos=r,%  
4   capVPos=c,% the default  
5 ]{figure}{\includegraphics{rose}}{Caption centered right beside the  
float}{fig:6}
```

6 Horizontal Position of the Float

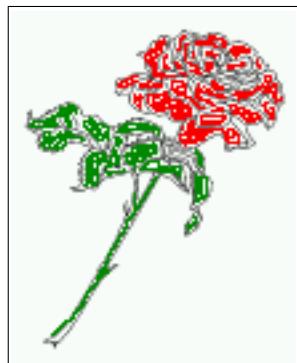

Figure 10: Caption
at top right beside
the float and object
position left

The code for figure 10:

```
1 \hvFloat[%  
2   capWidth=0.25,%  
3   capPos=r,%  
4   capVPos=t,%  
5   objectPos=l,%  
6 ]{figure}{\includegraphics{rose}}{  
Caption at top right beside the float and object position left}{fig:7}
```

The code for figure 11:

Figure 11: Caption at top left beside the float and object position right

```

1 \hvFloat[%  

2   capWidth=0.25,%  

3   capPos=l,%  

4   capVPos=t,%  

5   objectPos=r,%  

6 ]{figure}{\includegraphics{rose}}{  

7   Caption at top leftt beside the float and object position right}{fig  

     :8}

```

7 Framed Caption and/or Object

It is possible to get caption and object both framed with the global package option `fbox`. This happens for all macros and can be disabled with the macro options `framedCaption` and `framedObject`. If `fbox` is not used then it is possible the other way round.

Figure 12: Disabled global package Option `fbox` for the caption

The code for figure 10:

```

1 \hvFloat[%  

2   framedCaption=false,%  

3   capWidth=0.25,%  

4   capPos=r,%

```

```

5   capVPos=t,%
6   objectPos=l,%
7 ]{figure}{\includegraphics{rose}}{%
8   Disabled global package Option \texttt{fbox} for the caption}{fig:70}

```

Figure 13: Disabled global package Option `fbox` for caption and object

The code for figure 11:

```

1 \hvFloat[%]
2   framedCaption=false,%
3   framedObject=false,%
4   capWidth=0.25,%
5   capPos=l,%
6   capVPos=t,%
7   objectPos=r,%
8 ]{figure}{\includegraphics{rose}}{%
9   Disabled global package Option \texttt{fbox} for caption and object}{%
   fig:71}

```

8 Full Page Width in Landscape Mode

If you do not want to load the `lscape` package you can use the `floatPos=p` option to put the image on an own page and rotated by 90 degrees (figure 14).

Code for figure 14:

```

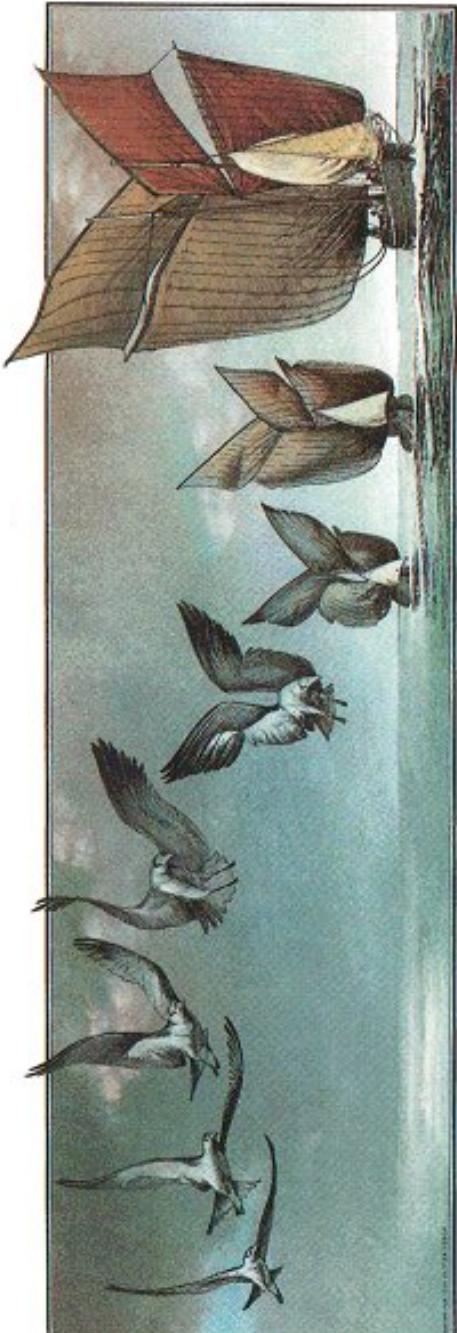

1 \hvFloat[%]
2   floatPos=p,%
3   capWidth=1,%
4   capPos=b,%
5   rotAngle=90,%
6   objectPos=c%
7 ]{figure}{\includegraphics[width=0.9\textheight]{bateaux}}{%
8   Caption at top right beside the float and object position right}{fig
   :9}

```

The float can also be put to the left or to the right (above/below in landscape) with the `objectPos=l` parameter

The code for figure 15:

Figure 14: Caption at top and together with the object rotated

Comment naissent les baleaux

Eromesmial natalensis et albatross

Figure 15: Caption right beside the float and object position left. The caption rotated by -90 degrees

```

1  \hvFloat[%  

2    floatPos=p,%  

3    capWidth=h,%  

4    capPos=r,%  

5    objectAngle=90,%  

6    capAngle=-90,%  

7    objectPos=l%  

8  ]{figure}{\includegraphics[width=\texttheight]{bateaux}}%  

9  [Rotated Caption]{%  

10 Caption right beside the float and object position left. The caption  

     rotated by -$90$ degrees}{fig:10}

```

9 The **nonfloat** Option

Sometimes it is better to put a "float" in a specific position of the page. This is possible with the **nonfloat** package and the option `nonFloat=true`.

```

1  \hvFloat[%  

2  nonFloat=true,%  

3  capWidth=0.25,%  

4  capPos=r,%  

5  capVPos=b,%  

6  objectPos=c,%  

7  ]{figure}{\includegraphics{rose}}%  

8  [Nonfloat Captions]{%  

9  Caption of a "nonfloat" Object, using the \texttt{nonfloat} Package}{  

    fig:11}

```

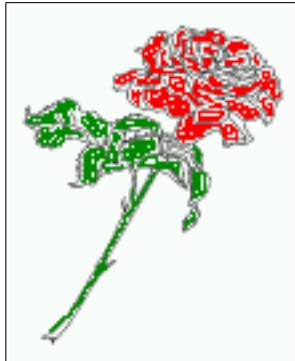

Figure 16: Caption of a "nonfloat" Object, using the `nonfloat` Package

The image 16 is exactly placed where the `hvFloat` command appears. There are only commands for `figure` and `table` environments:

```

1 \newcommand{\figcaption}{\def\@capttype{figure}\caption}  

2 \newcommand{\tabcaption}{\def\@capttype{table}\caption}

```

But it is no problem, to define more `xxxcaption` commands to support other with the `float` package defined new floats.

Name	Type	Description
hvFloat	command	places object and caption in different ways
figcaption	command	writes a figure caption in a non floating environment
tabcaption	command	writes a table caption in a non floating environment
setDefaults	command	sets all options to the defaults

Table 3: Demonstration of the `useOBox` Parameter

10 Tables as Objects

The object has to be passed as an parameter to the `hvFloat` macro. This is no problem with images but maybe with tables, so it is easier to use the box `\hvOBox` to save the table in this box and pass it then to `hvFloat` with the `useOBox` option. For example see table 3 and 4:

```

1 \begin{tabular}{l|l|l}
2   Name & Type & Description\\ \hline
3   \texttt{hvFloat} & command & places object and caption in different ways\\
4   \texttt{figcaption} & command & writes a figure caption in a non floating environment\\
5   \texttt{tabcaption} & command & writes a table caption in a non floating environment\\
6   \texttt{setDefaults} & command & sets all options to the defaults
7 \end{tabular}
8 }
```

The code for table 3 and 4 is:

```

1 \hvFloat[%]
2   floatPos=!hb,%
3   useOBox=true]{table}{}{Demonstration of the \texttt{useOBox} Parameter}{table:1}
4
5 \hvFloat[%]
6   floatPos=hb,%
7   useOBox=true,%
8   objectAngle=90,%
9   capPos=r,%
10  capVPos=t,%
11  capWidth=0.3]{table}{}{Demonstration of the \texttt{useOBox} Parameter}{table:2}
```

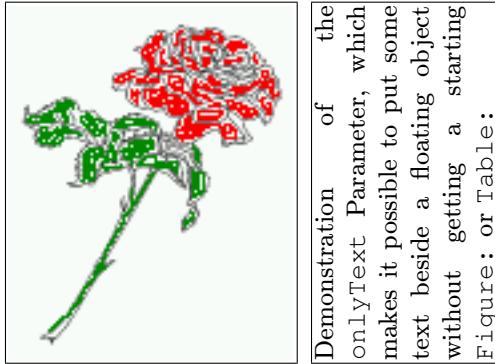

In this case leave the third parameter empty.

11 Text and Objects

With the `onlyText` option it is no problem to put some text beside an image without getting the caption titels figue/table. The object still can be a floating one or a nonfloating if the `nonfloat` is used.

Table 4: Demonstration
of the `useOBox` Param-
eter

Name	Type	Description
<code>hvFloat</code>	command	places object and caption in different ways
<code>figcaption</code>	command	writes a figure caption in a non floating environment
<code>tabcaption</code>	command	writes a table caption in a non floating environment
<code>setDefaults</code>	command	sets all options to the defaults

Demonstration of the onlyText Parameter, which makes it possible to put some text beside a floating object without getting a starting Figure: or Table:

The code for figure 11:

```

1 \hvFloat[%]
2 onlyText=true,%
3 capAngle=90,%
4 capPos=r,%
5 capVPos=t,%
6 capWidth=h}{}{\includegraphics{rose}}%
7 ["\texttt{onlyText}" Caption]{%
8 Demonstration of the \texttt{onlyText} Parameter, which makes it
9 possible to put some text beside a floating object without getting
10 a starting \texttt{Figure:} or \texttt{Table:}{fig:text}

```

A Problems

With the nonfloat option all objects are left aligned, \centering doesn't work here. Only God knows why ... **solved!**

Optional Arguments for a short caption doesn't work for the nonfloat option. **solved!**

B To Do

Using the float package to create by default a new float Environment, when the one which is passed to \hvfloat is not defined.
